ALGORÍTMICA 3

BÚSQUEDA DE PUENTES Y CICLOS EN UN GRAFO DE TAMAÑO "N"

GRUPO 5

🗆 Bayes Enriquez, Humberto Valentín	[3]
☐ Marquina Carihuasari, Alfonso Francisco	[3]
□ Molina Soto, Lesli Lisbeth	[3]
☐ Muñoz Capcha, Alex Cristhian	[3]
🗆 Parejas Fundar, Jorge Rubén	[3]
□ Ramirez Martinez, Aldo Raúl	[3]

Motivación

Comprender y mostrar el desempeño del algoritmo de búsqueda de puentes y ciclos en un grafo de tamaño n.

Así entender su funcionamiento y posterior aplicación en distintos casos que se requiera la ejecución de dicho algoritmo

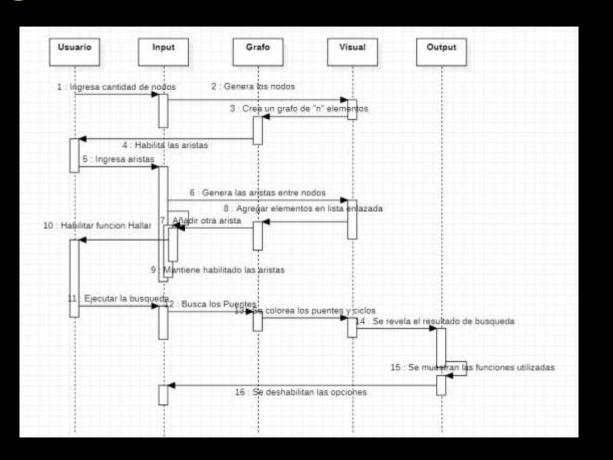

Problema

Para un grafo con n vértices y m aristas calcular y mostrar los puentes y ciclos. La entrada se compondrá de: El número de vértices n seguido del número de aristas m; que será ingresado como el inicio y final de cada arista.

DFS:

DFS(G)For vin G 2. If v not visited then 3. DFS-Visit(G, v) DFS-Visit(G, u) Mark u as visited 6. For v in Adj(u) 7. If v not visited then 8. Insert edge (u, v) in DFS tree 9. DFS-Visit(G, v) 10.

```
13
puente = function () {
    var visited = (function (s) { var a = []; while (s-- > 0)
        a.push(false); return a; })(this.V);
    var disc = (function (s) { var a = []; while (s-- > 0)
        a.push(0); return a; })(this.V);
    var low = (function (s) { var a = []; while (s-- > 0)
        a.push(0); return a; })(this.V);
    var parent = (function (s) { var a = []; while (s-- > 0)
        a.push(0); return a; })(this.V);
    for (var i = 0; i < this.V; i++) {
            parent[i] = Grafo.NIL;
            visited[i] = false;
    for (var i = 0; i < this.V; i++) {
        if (visited[i] === false)
            this.puenteUtil(i, visited, disc, low, parent);
};
```

```
puenteUtil = function (u, visited, disc, low, parent) {
   visited[u] = true;
   disc[u] = low[u] = ++this.tiempos;
   var i = (function (a) { var i = 0;
   return { next: function () { return i < a.length ? a[i++] : null; },
   hasNext: function () { return i < a.length; } }; })(this.adj[u]);
   while ((i.hasNext())) {
            var v = i.next();
            if (!visited[v]) {
               parent[v] = u;
               this.puenteUtil(v, visited, disc, low, parent);
               low[u] = Math.min(low[u], low[v]);
               if (low[v] > disc[u]){
                   PUEARIS.push((u+1).toString()+","+(v+1).toString());
            else if (v !== parent[u])
               low[u] = Math.min(low[u], disc[v]);
```
